

Community Behavioral Health: Provider Notification
ABA Performance Standards
August 31, 2016

CBH is endeavoring to enhance services available to children, adolescents, and young adults who are diagnosed with autism spectrum disorder (ASD). To this end, CBH has collaborated with a team of local autism experts and researchers to create Applied Behavioral Analysis (ABA) Performance Standards for BHRS providers in the CBH network based on current best practices in the field. The intention of these Standards is to bring uniformity and quality to ABA being provided in Philadelphia; the document will also be used as a starting point for identifying strengths and needs in current ABA programming. CBH is very interested in feedback from providers, stakeholders and families regarding the draft in its current stage. Please note that the Standards are currently a working document, and we will adapt it to include both provider input based on a consensus process, as well as any changes in state regulations. The Standards will also be expanded to include oversight and monitoring procedures before final publishing.
