

# Expected Outcomes and Monitoring Methods

## Appendix E

It is the hope of Community Behavioral Health (CBH) that awarded rate increases lead to improved clinical outcomes and/or improved quality measures. Please outline below the anticipated outcomes as well as monitoring methods that are anticipated as a direct or indirect result of the requested rate increase. Additional pages may be used.

Provider:

Level of Care:

| Measure                        | Anticipated Outcome  | Measurement Mechanism        | Frequency and Reporting                                    |
|--------------------------------|--|------------------------------|--|
| <i>What is being measured?</i> | <i>Is the measure expected to increase or decrease? By how much?</i> | <i>How is this measured?</i> | <i>How often is it measured? Is it regularly reported?</i> |
|                                |  |                              |  |
|                                |  |                              |  |
|                                |  |                              |  |
|                                |  |                              |  |
