

# Telehealth 101: Just the Basics for all Community-Based Levels of Care

**Presented by Community Behavioral Health**

**Compliance:** Ken Inness, Senior Director of Compliance and Compliance Officer

**Provider Training and Development:** Makiese N. DeVose, Ed. M, CPRP, MSW, LSW,  
Provider Training and Development Specialist

City of  
**Philadelphia**

April 30, 2020

## Telemedicine vs. Telehealth: Is There a Difference?

Telemedicine tends to be more restricting

Telehealth is typically used to describe a broader array of “services”

## Telemedicine 101: The Basics of the Basics

- ❑ Telemedicine is not CBH-regulated
  - ❑ Telemedicine is not new
  - ❑ The temporary changes to rules around provision of telemedicine are unprecedented
  - ❑ Relaxation of rules and regulations is done to ease access for our members and eliminate administrative burden for providers
  - ❑ Providers still need to maintain quality control and compliance practices
- 

## How Is It Done?

*In normal circumstances:*

- ❑ Real-time, two-way, audio-visual technology is required
- ❑ HIPAA security needs to be ensured
- ❑ Services referred to as “Store and Forward” are not billable

## That is so... February...

*Earlier this year, regulations in Pennsylvania required that telemedicine:*

- ❑ Be implemented only after an application to the Commonwealth
  - ❑ Still use face-to-face services in most instances
  - ❑ Be limited the scope to a relatively small group of practitioners
  - ❑ Have limits on the use of telemedicine to meet staffing requirements
  - ❑ Require the member to be in a provider's office
- 

## COVID-19 Telehealth Accommodations

- ❑ CMS and the Commonwealth moved quickly at the onset of COVID-19 in the USA to relax regulations around telehealth
  - ❑ In Pennsylvania, these changes are currently viewed as temporary
  - ❑ The Commonwealth issued two Bulletins announcing changes in response to COVID-19. Changes included:
    - Expanded list of available staff who could utilize telemedicine
    - While two-way video conferencing is still preferred, audio-only is permitted
    - Technology does not necessarily need to be HIPAA-compliant
    - Limitations on the use of telemedicine to meet staffing requirements were relaxed
    - Both clinical staff and members may be in remote settings
- 

## What Hasn't Changed?

- ❑ Telemedicine guidance does not alone waive any other regulation
- ❑ Rules/regulations that **have not** changed:
  - Progress notes must still be entered
  - Treatment/Recovery Plans still need to be completed
  - Staffing requirements, such as MHOP Psychiatric oversight, need to be met
  - Unless permitted by level-of-care-specific regulation, calls that do not result in a member interaction are not billable
  - Units billed must still match the actual time of the service

# Telehealth and Fraud

*Common telehealth fraud schemes include:*

- ❑ Services not provided
- ❑ Using telehealth/telemedicine to market non-medically necessary services
- ❑ Billing for more services than provided
- ❑ Using telehealth/telemedicine to aid in patient brokering
- ❑ Use of non-qualified staff

# Telehealth Best Practices

- ❑ Two-way audio-video always preferred
- ❑ Electronic Health Records are recommended
- ❑ Crisis Plans should be completed
- ❑ Make sure sessions are as secure as possible
- ❑ Plan to get physical signatures if using verbal consents
- ❑ **Never back-date signatures**
- ❑ Plan to verify services delivered as clinician indicated

# Telehealth Implementation Strategies for Success

City of  
**Philadelphia**

**Having a solid policy and procedure for how your organization is implementing telehealth during the COVID-19 pandemic is key!**

What is your continuity of operations plan?

How often is the plan reviewed/updated?

Do any current policies need to be updated?

## Planning for Telehealth Service Delivery

*What does a quality telehealth session look like for your organization?*

- ❑ Managing expectations, for both staff and for supervisors
- ❑ Planning for the “what-ifs” that will occur
- ❑ Preparing for sessions, for both staff and for clients
- ❑ Training and supervision for staff:
  - to ensure quality and consistency in telehealth sessions provided
  - to maintain staff morale and maintain productivity

# Technical Considerations

- ❑ Same service, but different delivery
- ❑ What are some of the complications with technology, and how do we work around them?
- ❑ Troubleshooting/contingency plan to overcome barriers

# Clinical Considerations

- ❑ What are all the possible options for support?
- ❑ Take into consideration individual/family preferences for sessions
- ❑ Educate on platform being used
- ❑ Privacy
- ❑ Documentation
- ❑ Safety/Crisis planning
