

- 1. [Could CBH] give more insight into what type of services the agency seeks regarding potential content development? There was mention of this in passing, and we want to understand the scope of the interest because it affects pricing.**

CBH is not seeking ABA telehealth treatment through this platform; it is looking to bridge the gap between identifying the diagnosis and the need for services and the start of ABA treatment. This product should be ABA-aligned and provide psychoeducation for families receiving a first diagnosis of autism. This should include asynchronous videos for situations commonly encountered by families with children with ASD to provide essential intervention. We are looking for content specific to parents, but we may also consider content geared directly towards youth. CBH wishes to implement this product quickly; therefore, the content must already be developed.

- 2. [Could CBH discuss the] age range of children you plan to serve, early intervention or into transition and adulthood?**

CBH is looking for products that can span ages 0-21.

- 3. Will the providers implement the Digital Therapeutics Intervention solution and offer it to families, or is it expected that the families will work directly with the vendor?**

We hope to offer this solution as a self-paced asynchronous resource for families. CBH will be engaging families and can either directly support enrollment in the service or provide a handoff to the vendor for enrollment if that is preferable.

- 4. Does parent training play a role in the proposed complementary services?**

We envision this service to provide parent psychoeducation around diagnosis and some general training to support parents in scenarios that are frequently challenging for parents with children with ASD, e.g., building routines. However, we do not expect parent training at the individual child level to be a part of this service.

- 5. In addition, are assessment and billing options included or seen as an advantage to a full solution offered by a vendor?**

Not at this time.

- 6. What is the proposed timeline for the implementation of such a digital service?**

We are looking to make this service available to our families as soon as possible and are looking for a product already developed.
