

Phishing Email Reminder

Community Behavioral Health (CBH) has recently seen an increase in email phishing activities, specifically those targeted to health care entities. This Provider Notice is a reminder to agencies to vigilantly protect your agency against malicious phishing email. More specifically, we have seen these phishing emails targeting C-suite staff positions. It is critical that Providers immediately contact your CBH Provider Representative if your email has been compromised. CBH will be issuing a more detailed Provider Bulletin outlining general guidance on how to protect against malicious attempts. We appreciate your ongoing support and diligence in protecting data against cyber-attacks.
